Title

: The Unbalanced Reactions of Reticulo-Endothelial Lymphatic

Nodes in the Newborn.

Orig Pub : Scripta med., 1956, 29, No 3-4, 69-82

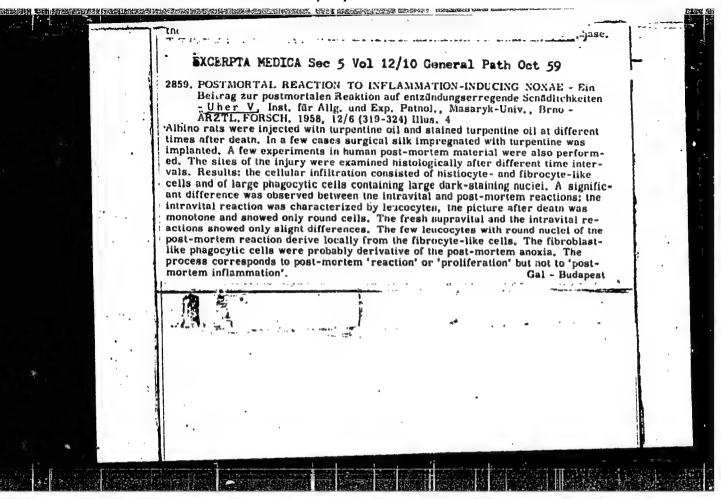

Abstract: Theabdominal lymphatic nodes of 77 children who died soon after birth, were examined. In 18 percent of the cases, diffuse reticulo-endothelial hyperplasias were observed, in 28 percent of the cases, such reticulo-endothelial reaction was not found. In the remaining cases it was moderate and consisted in an inflarration of the lymphatic sinuses. The author presumes that the above-mentioned reactions are reversible and depend upon the accumulation of protein in the organism, which penetrates into it through the abdominal

L 9759-66 SOURCE CODE: HU/0018/65/017/001/0040/0042 ACC NR: AP6001952 AUTHOR: Toth, Tamas-Tot, T.; Polay, Erika-Polai, E.; Uhereczky, Gabor-Ukheretski, G. ORG: Institute of Pathophysiology, Medical University of Budapest (Budapesti Orvostudomanji Egyetem Korelettani Intezete) TITLE: Development of Loring-Goracz type of acute renal hypertension in cats SOURCE: Kiserletes Orvostucomany, v. 17, no. 1, 1965, 40-42 TOPIC TAGS: experiment animal, surgery, blood pressure, wrology, animal physiology The hypertension operation described ABSTRACT: by Loring and Goracz on rats can also be used on cats. The essence of the technique is the covering of both kidneys with a slightly extended rubber capsule. The normal blood pressure of 32 cats was 143 mm Hg. The blood pressure of 5 animals remained unchanged following a shum operation. Of the remaining 27 animals, the blood pressure rose to above 200 mm lig in 19. three days after the operation, 3 showed no significant change and 5 died. The maximal blood pressure obtained was 240 mm Hg. From the fourth postoperative day on, the animals succumbed rapidly. For this reason, the method can only be used in acute experiments. ORG: Obstetrical and Gynecological Clinic, Medical University of Szeged, Szeged (Szegedi Orvostudomanyi Egyetem Szuleszeti es Nogyogyaszati Klinikaja) TITLE: Changes in the ICSH content of the pituitary and in the genital cycle of female rats as a result of loading with the oral contraceptive, lymestrenol SOURCE: Kiserletes Orvostudomany, v. 17, no. 1, 1965, 51-58 TOPIC TAGS: biochemistry, gland, experiment animal, biologic reproduction, drug effect, pharmacology, urology, endocrinology, hormone, drug The effective ovulation-inhibiting ABSTRACT: dose of Lynestrenol is 4 mg daily over a 20 day period. This dose decreases the weight and PAS-positivity of the rituitary moderately, and its ICSH content greatly. The weight and histological appearance of the ovaries is also indicative of a decreased gonadotropin, mostly of absent ICSH, secretion. The direct gestagenic and estrogenic effects of the compound are summated in the uterus and on the cervical mucosa. The adrenals showed no significant changes. The effect was reversible and a rebound effect could not be observed. Orig. art. has: 6 figures and 4 tables. [JFRS] SUB CODE: 06 SUEM DATE: 12Mar64 / ORIG REF: 001 / Card 1/1

"The ICSH Content of the Adenohypophysis of Female Rats After Serum Gonado-tropin (PMS) Treatment."

Budapest, Kiserletes Orvostudomany, Vol XV, No 5, Oct 63, pages 526-529.

Abstract: [Authors' German summary] The ICSH content of the anterior lobe of the pituitary of mature female rats decreases considerably as a result of serum gonadotropin. At the same time, the weight of the pituitary as well as the number of PAS positive cells in the anterior lobe increase. The various possibilities of interpretation for the observed phenomena are pointed out by the authors. 1 Hungarian, 8 Western references.

Budapest, Acta Physiologica Academiae Scientiarum Hungaricae, Vol XXIII, No 3, 1963, pages 287-292.

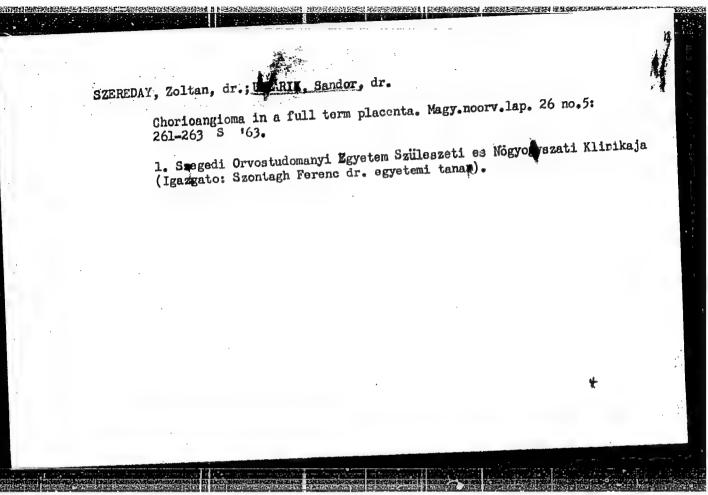

Anterior pituitary grafts under the renal capsule or in non-hypothal-amic parts of the brain of hypophysectomized animals contained no eosinophils as a consequence of the highly inactive thyroid, but these cells reappeared after thyroxine treatment. In implants localized in the hypophysio-tropic area of the hypothalamus, eosinophils occurred only if the histological structure of the thyroid was normal. It was concluded that the nerve cells of the hypophysio-tropic area of the hypothalamus produce a substance which plays an important role in the maintenance of growth hormone secretion. ORG: Department of Medicine and Department of Gynecology, Medical University of Szeged, II (Szegedi Orvostudomanyi Egyetem, II. Belgyogyaszati Tanszek es Hogyogyaszati Tanszek) TITIE: Role of gonadotropic hormone in the control of the serva glycoprotein level of rats This paper was presented at the 29th Meeting of the Hungarian Physiological Society held in Szeged from 2 to 4 July 1964] SOURCE: Academia scientiarum hungaricae. Acta physiologica, v. 26, Supplement, 1965. 61 TOPIC TAGS: hormone, endocrinology, rat, gland, serum, protein ABSTRACT: The changes in total serum protein, protein-bound hexose and sialic acid concentration as well as the role of the adrenals and the pituitary have been studied in orchiectomized and control rats as well as in rats treated with gestagen (Lyenoestrol, Organon). It was found that crchiectory and the inhibition of gonadotropin secretion result equally in elevation of the serum glycoprotein level. This effect requires the presence of intact adrenal function. TITLE: Studies of the stability of chelates of sterically hindered beta-diketones
SOURCE: Zeitschrift für anorganische und allgemeine Chemie, v. 340, no. 5-6, 1965, 319-32. TOPIC TAGS: chelate compound, dioxane, chemical stability, dissociation constant, phenyl compound
ABSTRACT: enol dissociation constants of mesitoylacetone, mesitoylbensoylacthane and dimesitoylmethane and the stability constants of their Cu(II), Ni(II), Zn(II) and Me(II) complexes were determined by a potentiometric method in dioxane-water mixture (%) dioxane by volume) and compared with analogous constants for benzoylacetone and dibenzoylmethane. Substitution of a phenyl group in the β-diketone system by a methyl group causes a decrease in chelate stability. This behavior is discussed on the basis of resonance interactions between the chelate ring and its aromatic substituents. To characterize the β-diketones, some metal complexes were isolated in the solid state. The authors thank Professor, Dr. H. Holzapfel for assistance in carrying out this work and for support.
